

Small Tunnel

Total Pieces	8
Squares	8
Triangles	0
Difficulty Level	Easy

Simply Follow These Steps

WALL PANELS

1. Make a single wall panel by connecting two squares using all 4 connectors on both sides. Make sure to thread the connectors through the first slits on both sides.
2. Repeat to build two additional wall panels.

ASSEMBLING THE PANELS

1. Connect all three panels together along both edges of the center panel as shown. Use the second slit openings to secure the panels but only connect the top side that's facing you. Do not connect the underside of the panels.

PUTTING THE TUNNEL IN POSITION

1. Flip the attached panels over to set up the tunnel frame as shown. The frame is likely to wobble so don't be concerned.

THE FINISHING TOUCH

1. Attach two square blocks at each end of the tunnel along the tunnel's outer edges. Use the second slit openings for these corner connections. This step creates the front entry way and helps to stabilize the tunnel frame.
2. Okay, you are done building. Now let's start playing! Where does the tunnel lead to? A magical land or a world deep within the ocean? Or maybe it's a portal for time travel? Just let your imagination take you where you want to go!!
